

Trim Happens! Fuel Trim Road Test Diagnostics

Instructor:

Jim Wilson

Make every road test count with a proven four-step fuel trim process for code and no-code driveability concerns across domestic, Asian, and European vehicles. Evaluate PCM fuel control, sensor inputs, operating conditions, and supporting data to establish diagnostic direction before returning to the bay.

- Fuel Trim Control - PCM Correction Strategy
- Four-Step Road Test Diagnostic Process
- Global OBD II Versus Enhanced Data
- Sensor Input Evaluation Under Operating Conditions
- Similar Conditions Window and Freeze Frame Analysis
- Rear O2 Fuel Trim and Drive Cycle Strategy
- Additive and Multiplicative Fuel Trim
